Vu Van Thang

Fullstack Developer

0814134634 thangvuvan0611@gmail.com https://github.com/thanggw https://thanggw.github.io/portfolio/ Hanoi

CAREER GOALS

Fullstack Developer with hands-on experience building web applications using React, Next.js, Vue 3, NestJS, and Spring Boot. Seeking a Fresher/Junior Fullstack Developer position where I can contribute to production projects and strengthen my backend and system design skills.

SKILLS

Frontend	ReactJS, Vue 3, NextJS, TypeScript, JavaScript, TailwindCSS, Sass, Redux Toolkit, React Query, Vue Router
Backend	NestJS, NodeJS, REST API, Spring Boot
Database	PostgreSQL, MongoDB, Prisma
Tools	Git, Docker, Linux, CI/CD

WORK EXPERIENCE

Ecombe Technology Development 01/2026 - 08/2026

Fullstack Developer

- Developed responsive web interfaces using Vue 3 and TypeScript, integrating REST APIs for end-to-end business workflows.
- Customized Shopify themes using Liquid and integrated external APIs and Webhooks to extend store functionality.
- Collaborated with Product, Design, and QA teams to deliver fullstack features for international merchants.
- Identified and resolved frontend and backend performance bottlenecks to improve rendering performance and overall user experience.

Melisoft 03/2025 - 12/2025

FullStack Developer

- Developed web applications using React, Next.js, Java, and MongoDB in a Linux development environment.
- Built reusable UI components, integrated REST APIs, and implemented authentication and business workflows.
- Researched and applied new technologies based on project requirements and existing system architecture.
- Collaborated with Designers, BAs, and QAs to analyze requirements, propose technical solutions, and deliver features.

PROJECTS

McCE – Real-time Collaborative Code Editor | *Fullstack Developer*

- Deploy**:** https://mcc-e.vercel.app
- Technologies: Next.js, Spring Boot, Redis (Upstash), WebSocket (STOMP), Judge0 API, Docker, Vercel/Render.
- Built a real-time collaborative code editor for multi-user editing via WebSocket (STOMP), persisting room state in Redis.
- Integrated Judge0 API to execute user-submitted code in an isolated remote execution environment.
- Developed Regex-based preprocessing to transform user-defined Java classes into a standardized format compatible with the execution engine.
- Deployed the frontend on Vercel and backend services on Render with environment-based configuration.

Velo – Agile Project Management & Admin Platform | *Fullstack Developer*

- Deploy: https://velo-nu-two.vercel.app
- Technologies: Vue 3 (Composition API), TypeScript, Pinia, Vue Router, Element Plus, NestJS, Prisma, PostgreSQL (Supabase), Vercel/Render.
- Built an agile project management platform with Vue 3, TypeScript, and Pinia.
- Implemented RBAC using navigation guards and custom v-permission directives for permission-based UI access.

- Developed an interactive Kanban board with drag-and-drop functionality and synchronized task updates with NestJS APIs.
- Deployed the frontend and backend separately using Vercel and Render with Supabase PostgreSQL.

EDUCATION

Hanoi University 2022 - 2026

Bachelor of Information Technology (Expected Graduation: 11/2026)

Academic Merit Scholarship (2 semesters: Fall 2023, Spring 2024)

CERTIFICATES

Certification Program in Java from T3H	07/2025
Hanu Test Certificate — Level B2 | Issued by Hanoi University	03/2026
